

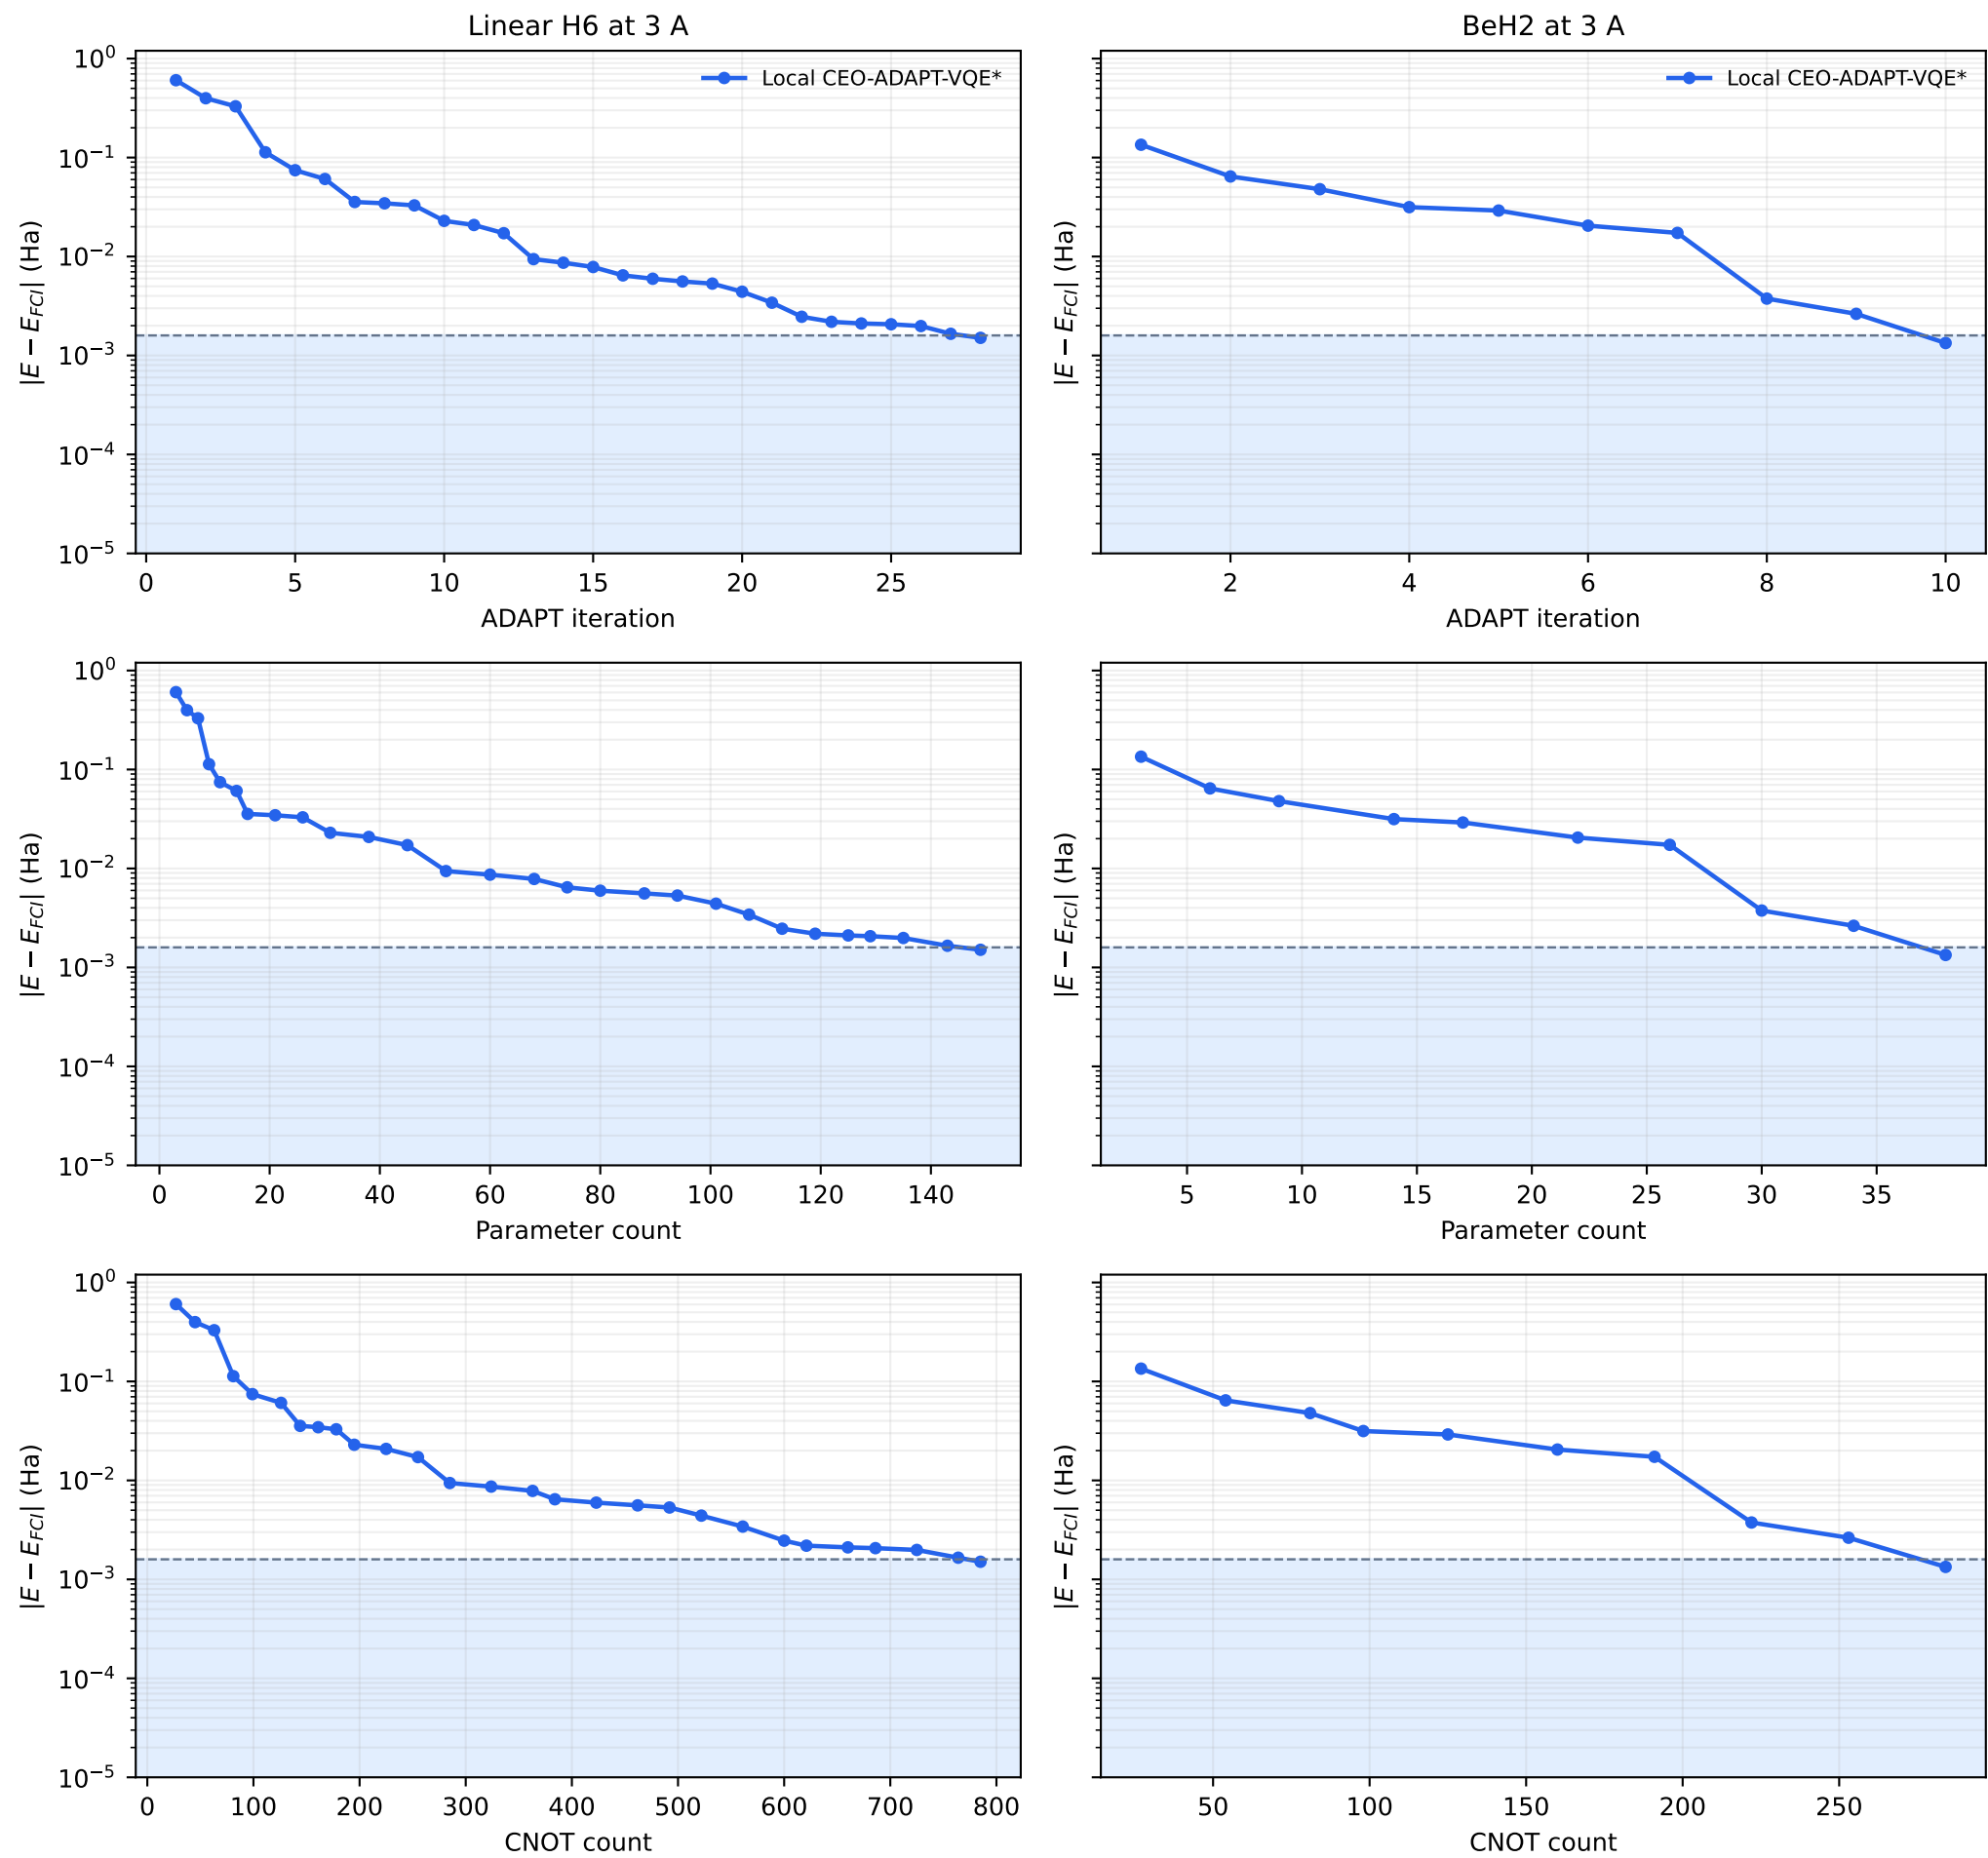

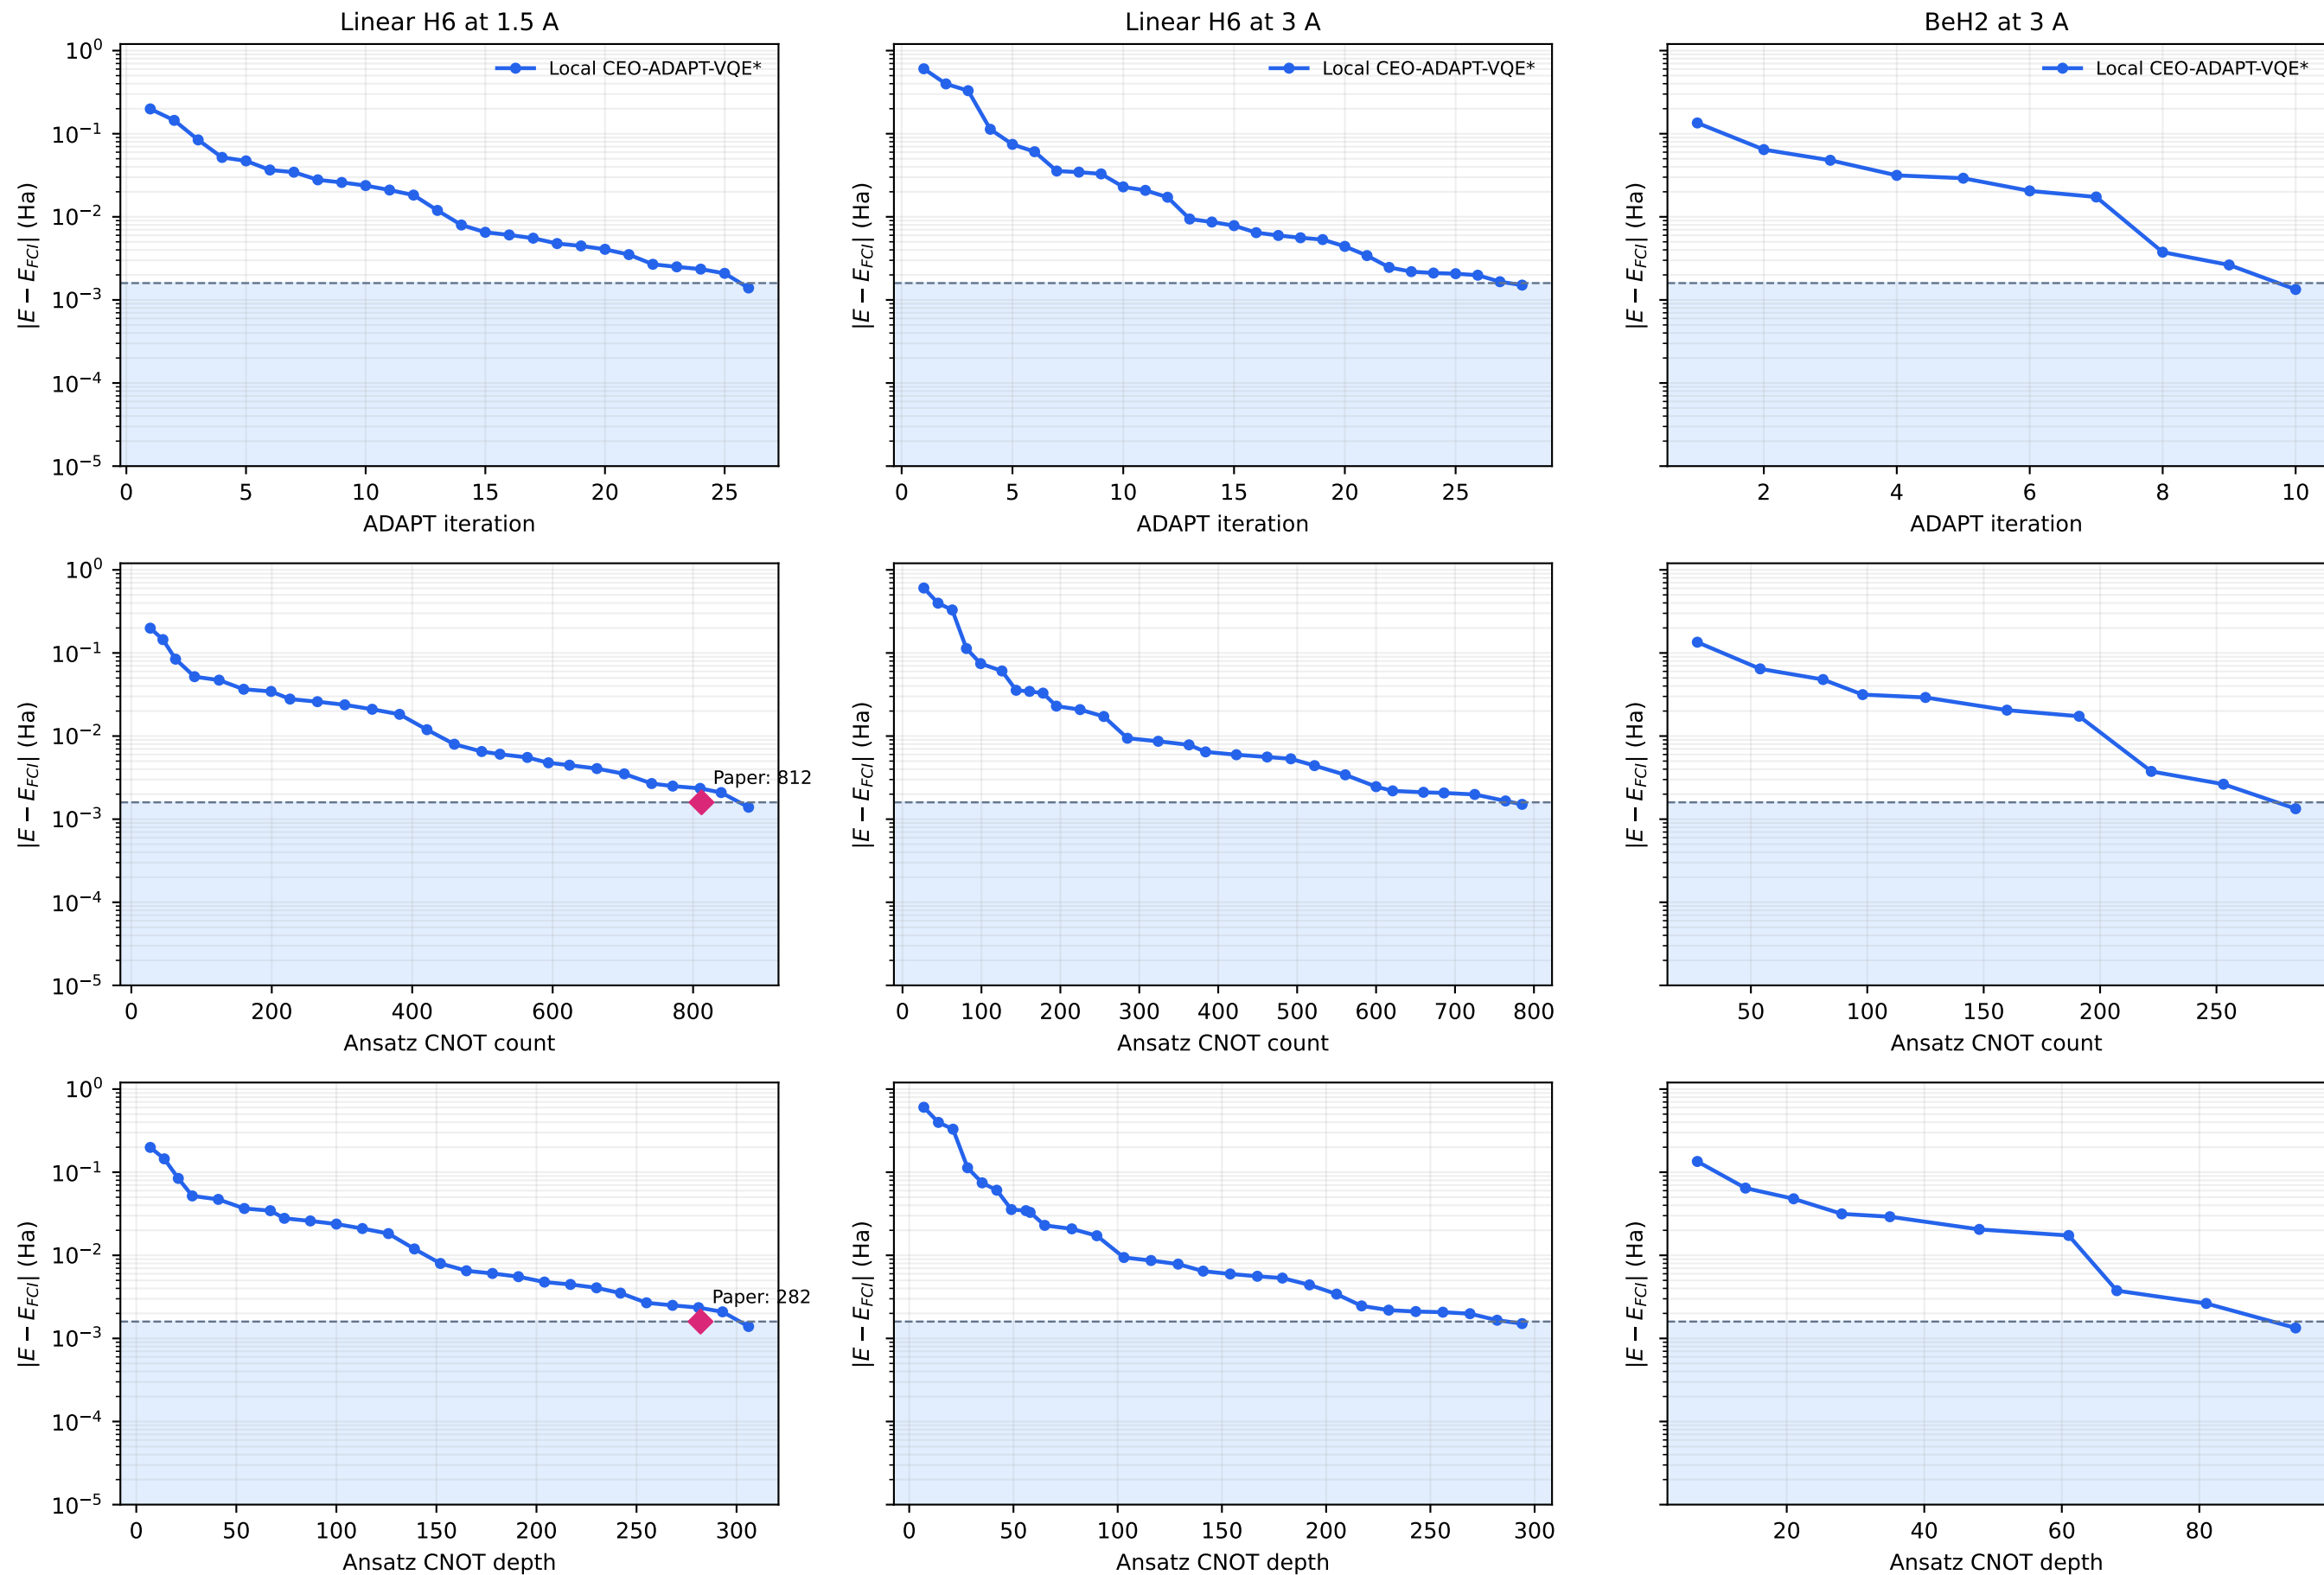

Fig. 11-style local CEO-star trajectories at stretched distances

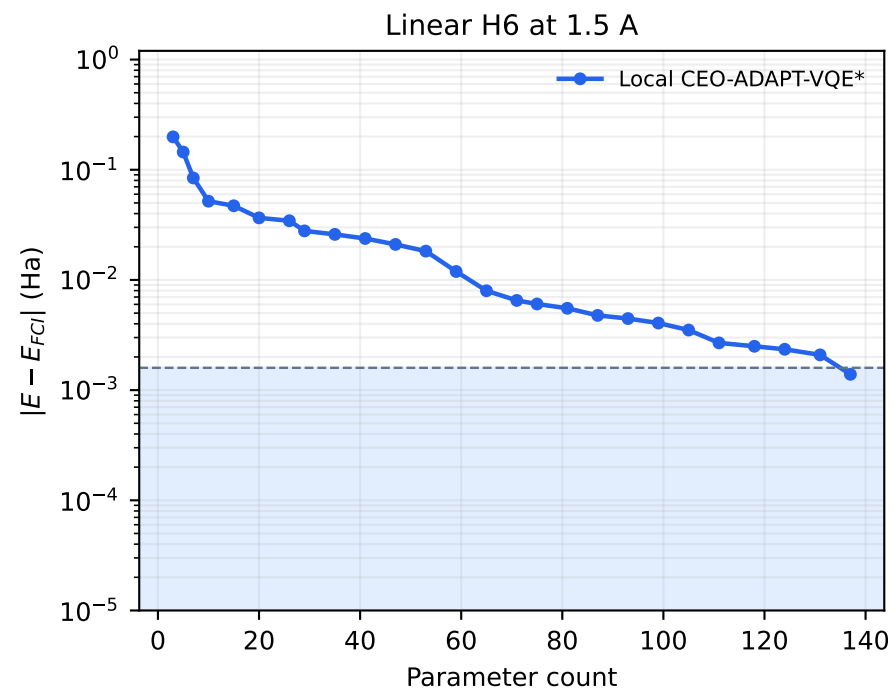

Paper Fig. 11 uses non-star CEO and a different termination rule; these curves are axis-equivalent, not direct reproductions.

Fig. 14-style CEO-star circuit trajectories and direct H6 1.5 A reference

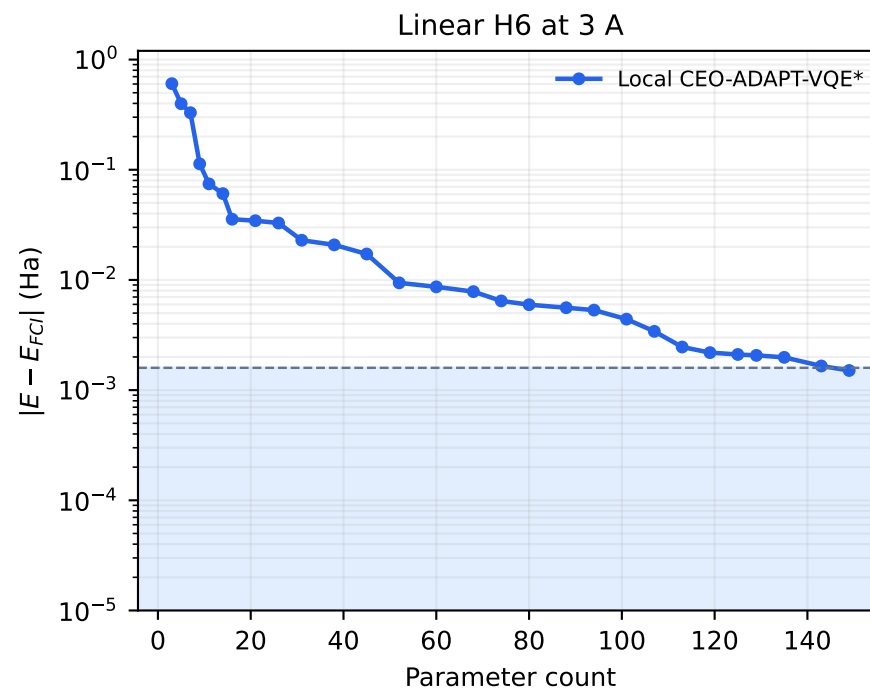

Only H6 1.5 A matches the paper CEO-star molecule/distance. The paper endpoint y-value is placed at the chemical-accuracy boundary because its exact error is not tabulated.

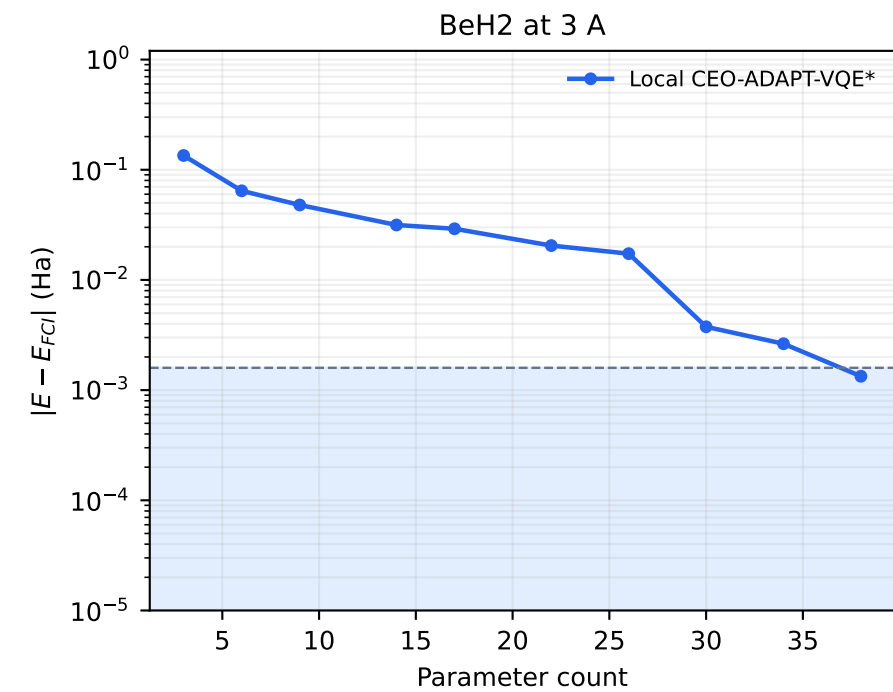

Fig. 15-style parameter trajectories and Measurement Cost claim boundary

Paper-equivalent Measurement Cost
 Local trajectory: N/A
 Paper Table 1 endpoint: 10,857
 No substitute counter is plotted.

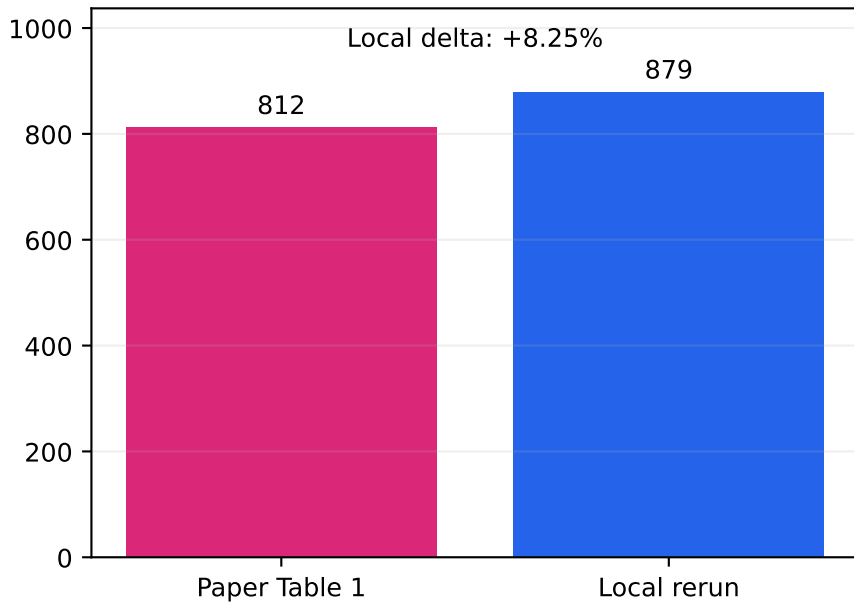

Paper-equivalent Measurement Cost
 Local trajectory: N/A
 No substitute counter is plotted.

Paper-equivalent Measurement Cost
 Local trajectory: N/A
 No substitute counter is plotted.

Direct comparison - CEO-ADAPT-VQE* H6 at 1.5 A, first chemical accuracy
